New Release of Shipping Solutions Adds New Forms and Compliance Features to Best-Selling Export Software

Export expertise: Shipping Solutions is releasing version 7.2 of its Shipping Solutions Professional export documentation and compliance software. The software automates the process of creating the documents required for U.S. exports and reduces the amount of keying needed by up to 80 percent by eliminating duplicate data entries.

With Shipping Solutions Professional, users can complete more than two dozen standard export forms and print them out on plain paper, e-mail the documents, and screen their shipments using the software's Export Compliance Module. This module allows users to determine which documents are required for each shipment, determine whether or not an export license is required, and make certain they aren't shipping to someone or someplace that is prohibited by the U.S. government. The U.S. Census Bureau has also certified Shipping Solutions for its Automated Export System (AES) so users can file their Shipper's Export Declaration (SED) information electronically.

Designed for small and medium-sized companies, the software is marketed as an affordable yet comprehensive export system with features previously found only in complex, higher-priced software. Users can operate Shipping Solutions Professional as a stand-alone application or integrate it with their accounting, order-entry or ERP systems.

New features in Version 7.2 include updated versions of the IATA Dangerous Goods form and the Canada Customs Invoice to meet new export requirements; the U.S. Certificate of Origin for Exports to Israel form; and an enhanced Export Compliance Module that checks more data fields when screening shipments against government Restricted Party lists.
